

Before Calibration (ECE = 0.735)

After Calibration (ECE = 0.676)

## Model Comparison Report

=====

- Model: Model
- Dataset: Dataset

### Calibration Before:

-----

- ECE: 0.735

### Calibration After Temperature Scaling:

-----

- ECE: 0.676
- Best Temperature: 10.00

### Observations:

-----

- Significant reduction in ECE after scaling (if applicable)
- Visual comparison confirms improved alignment between confidence and accuracy

### Recommendations:

-----

- Use temperature scaling in production scoring if ECE improved significantly
- Re-check on different validation/test sets
