

Before Calibration (ECE = 0.070)

After Calibration (ECE = 0.114)

Model Comparison Report

=====

- Model: Model
- Dataset: Dataset

Calibration Before:

- ECE: 0.070

Calibration After Temperature Scaling:

- ECE: 0.114
- Best Temperature: 10.00

Observations:

- Significant reduction in ECE after scaling (if applicable)
- Visual comparison confirms improved alignment between confidence and accuracy

Recommendations:

- Use temperature scaling in production scoring if ECE improved significantly
- Re-check on different validation/test sets
